## INSTRUCTIONS FOR DEMO DOWNLOADS

- Check through the software and download the program you think you might like to purchase. It is important to understand that the demo has pre-set **LIMITATIONS**. Each demo will be different, but certain values will be set that “cannot be changed”. This will allow you to try out the software and check out the interface. The software “generally” has a very short learning curve. Most people can use this very effectively in one hour, or less.
- **STEP #1:** Down load the demo to your desktop. A zipped up folder will appear, when the download is complete.
- **STEP #2:** Double click the zipped up folder. This should open another window with a file folder in it. You will NOT be able to use the files in this folder, as they appear.
- **STEP #3:** **Extract** all the files from this folder. This will generally open another window with a folder in it.
- **STEP #4:** Open the folder. You will notice **THREE** Files. Two of these are not usable directly. You will notice one file called **SET – UP**.
- **STEP #5:** Double click on this Set – Up file, A box will open up. Push the **RUN** button.
- **STEP #6:** Some files will be copied to your computer to run the program. A blue screen will open up and you will notice the name of the demo on the top of this screen. **Press the OK button**.
- **STEP #7:** Press the **BIG button** and begin to download the program to your computer. Use the default folder created for this software so it can easily be located in your program files.
- **STEP #8:** When your program has loaded up successfully, go to your windows **START** button and select **ALL Programs**. Go to the folder named after the title of the software downloaded. Double Click on the program icon and begin your demo.
- The program will be “smaller than your screen”. This is normal. Read through the general instructions, then **HIDE** them. Read over the **End User License Agreement – common to most pograms**. Press the **ACCEPT** button once agreed to.
- Read the instructions in the software. Please let us know about **ANY** errors found. We will correct these immediately. We look forward to your suggestions and comments.
- The FULL version sent to you will be modified to be **HIGH SECURITY** software. *This is great for people purchasing the software that do not want it to be copied by others.* This protects your competitive edge and is one of the big advantages of our software. This software is easily “customized” to automate your estimation/design process at a very affordable price and the **HIGH SECURITY** feature is a bonus for this application and protects your added projects.
- Thank you for trying and purchasing our software. **Note:** *A demo is NOT required for every version of the software, since the general features are illustrated in the demos provided.*
